PART 1

PETROPHYSICAL PROPERTIES AND RELATIONS WITH PETROLOGY

Chapter 1-1 Calculation of Fluid Volumes <i>In Situ</i> (Accumulations): Static Properties	3
1-1.1 Porosity, Mineralogy of the Solid Phase and Compressibility	3
1-1.1.1 Porosity: definitions (connected, occluded, effective porosity, etc.)	3
1-1.1.2 Porosity measurement principles	5
1-1.1.3 Clay porosity	12
1-1.1.4 Order of magnitude of porosity in geomaterials	20
1-1.1.5 Solid phase density and mineralogy	26
1-1.1.6 Effect of stresses on porosity, Compressibility	39
1-1.2 Capillary Pressure in Case of Perfect Wettability	52
1-1.2.1 Definition of perfect wettability and capillary pressure	53
1-1.2.2 Capillary pressure curve	56
1-1.2.3 Capillary phenomena in soils	64
1-1.2.4 Capillary pressure curve measurement principle: Restored states, Centrifuge, Mercury Porosimetry	73
1-1.2.5 Processing of capillary pressure data	94
1-1.2.6 Location of fluids in oil and gas reservoirs	102
1-1.2.7 Capillary rise: Hirschwald coefficient, Apparent radius of capillary rise ...	113
1-1.2.8 Overview on three-phase capillary equilibria	121

Chapter 1-2 Fluid Recovery and Modelling: Dynamic Properties	123
1-2.1 Intrinsic Permeability	123
1-2.1.1 Definitions and Darcy's law	123
1-2.1.2 Intrinsic permeability measurement principle	128
1-2.1.3 Geometric parameters affecting permeability and simple models	138
1-2.1.4 Porosity/Permeability relations in rocks	144
1-2.1.5 Effects of stress and temperature on the intrinsic permeability	163
1-2.2 Wettability of Reservoir Rocks	167
1-2.2.1 Definition and measurement of intermediate wettability.	167
1-2.2.2 Wettability of reservoir rocks	173
1-2.3 Relative Permeability and End Points	179
1-2.3.1 Overview	179
1-2.3.2 Tentative simplification: search for the most important points on the relative permeability curve	184
1-2.3.3 More information about the "End Points", wettability effects	186
1-2.3.4 Relative permeability measurement principle	191
Chapter 1-3 Log and Geophysical Analysis	199
1-3.1 Electrical Properties: Estimation of Hydrocarbon Saturation	199
1-3.1.1 Resistivity of rocks saturated with electrolyte: Formation factor	199
1-3.1.2 Resistivity of porous media saturated with a two-phase mixture	208
1-3.1.3 The special case of clay media.	213
1-3.1.4 Effect of pressure and temperature on electrical properties	220
1-3.2 Seismic Properties: Effect of Porosity, Lithology and Nature of the Saturating Fluids on the Elastic Wave Velocity	221
1-3.2.1 Simplified definitions: moduli, P and S waves, velocities, attenuations	222
1-3.2.2 Scale effect: Ultrasonic, Sonic, Seismic frequency bands. Static properties, dynamic properties	227
1-3.2.3 Laboratory velocity measurement principle and "path dispersion" problem . .	230
1-3.2.4 Effect of differential pressure on velocities: Hertz coefficient.	233
1-3.2.5 Effect of the saturating fluid: Gassmann equation and its linear approximation as a function of K_{fl}	236
1-3.2.6 Porosity/lithology/velocity empirical relations	239
1-3.3 Petrophysical Applications of Nuclear Magnetic Resonance	248
1-3.3.1 Nuclear magnetic resonance (NMR), general principles.	248
1-3.3.2 Potential applications to petrophysics.	254

PART 2

SCALE CHANGES AND CHARACTERISATION OF POROUS MEDIA: METHODS AND TECHNIQUES

Chapter 2-1 Measurement Representativeness and Reservoir Characterisation	265
2-1.1 Overview on the Effect of Damage, Stress and Temperature Variations on Petrophysical Characteristics	265
2-1.1.1 Damage to laboratory samples	265
2-1.1.2 Influence of stresses and temperature on petrophysical characteristics	266
2-1.2 Representative Elementary Volume, Homogeneity, Isotropy	272
2-1.2.1 Definition of Representative Elementary Volume (REV)	272
2-1.2.2 Homogeneity and Isotropy	281
2-1.2.3 Continuously variable REV: self similarity and fractal object	288
2-1.3 Scale Changes	293
2-1.3.1 From plug to core and well logs	294
2-1.3.2 From core to well test (“bulk” and “matrix” property)	311
2-1.4 Rock Typing	317
2-1.4.1 Rock Typing, description and terminology difficulties	317
2-1.4.2 Core Rock Typing	318
2-1.4.3 Log Rock Typing	322
Chapter 2-2 Porous Network Observation Techniques	325
2-2.1 Thin Sections and Epoxy Pore Casts	325
2-2.1.1 Impregnation of porous networks by resins	325
2-2.1.2 Observation of thin sections under optical microscope	327
2-2.1.3 Observation under Scanning Electron Microscope (SEM)	330
2-2.2 Visualisation of Fluid Location in Pores	333
2-2.2.1 Direct observations of natural fluids: Cryo-scanning electron microscopy ..	334
2-2.2.2 Indirect observations using polymerisable liquids or fusible metal.	336
2-2.3 X-Ray Tomography	342
2-2.3.1 The medical scanner	344
2-2.3.2 Microtomography devices	347
2-2.4 Mineralogical Analysis Applied to Petrophysics: X-Ray Diffraction and Fluorescence	349
2-2.4.1 Some reminders about mineralogy/crystallography	350
2-2.4.2 Laboratory techniques	351
References	357
Porosity Terms Glossary-Index	365
Subject Index	371
