Climate, environment and circular economy

Renewable energies

Bio-based chemistry

Sustainable mobility

IFPEN has developed a position paper detailing a set of strategic recommendations for the development of FP10.

The Horizon Europe and Horizon 2020 funding programs have significantly enriched the scope and quality of research and innovation across our continent. By supporting large-scale, complex, and ambitious R&I activities, they have accelerated the development of solutions to the major challenges in science and society, pooling efforts and resources on a European scale.

As we approach the future European framework program for research and innovation (FP10), it is essential to continue and amplify these successes. FP10 must address the environmental, economic, societal, and geopolitical changes that Europe will face.

This document highlighting our thoughts on how we can shape collectively the future of research and innovation in Europe.
