Soil analysis and characterization

01 - 03 April 2026

Soils are at the heart of the greatest challenges of the century: **mitigating climate change, adapting to it, and ensuring food security**.

IFPEN and INRAE are actively involved in this field and are organizing the second edition of the SoilCET symposium, **a scientific event dedicated to soil carbon and its role in the ecological transition**, in order to present the latest research advances.

The event will be held at IFP Energies nouvelles, on the Rueil-Malmaison site, **from April 1 to 3, 2026**

| Contact: soilcet@ifpen.fr

This year's program covers four main themes:

- Policies, Regulation and Standardization on Soil Carbon
- Soil Carbon Economics
- Soil Organic Matter Dynamics and Carbon Quantification
- Integrated Assessments and Indicators for Evaluating Soil Health
