**100 rue du Trône**

IFPEN, [earth2](#) and [Région Nouvelle Aquitaine](#) are organising a seminar in Brussels on 1st July on natural hydrogen and its potential for Europe.

The seminar will consist of four sessions :

- Scientific knowledge and resource potential
- Prospects in Europe
- Regulatory framework for the deployment of the sector
- Financing the H<sub>2</sub> natural ecosystem

## Program and Registration

Natural hydrogen represents an emerging and promising opportunity for Europe: a potential new primary energy resource for the continent. Produced naturally by the Earth, it offers a very low-carbon solution with potentially highly competitive production costs. It has the potential to become a key pillar of the energy transition and European energy sovereignty.
