Responsible oil and gas

Basins and reservoirs modeling and simulation

IFP has recently created an R&D network of expertise to make the most of its

researchers' technical and scientific excellence and effectively promote it with its industrial, institutional and academic partners. This community of IFP experts currently boasts 6 Expert Directors and 21 Experts.

This fifth issue of "Science@ifp" deals at length with work initiated and led by some of our experts. In the future, we will often find the members of this community among our authors, and also future experts, since the very purpose of this newsletter is to report on the most significant scientific results to emerge from our R&D programs, while shedding light on their technological importance.

Summary:

- Improving solvent selection for **CO₂ capture**
 - **Stabilizing emulsions and aqueous foam**
 - Reconciling reservoir models and production data
 - **Optimizing energy management** in hybrid vehicles
 - Visualizing unburnt hydrocarbons in **low-NOx engines**
 - **Exergetic analysis** and sustainable development of processes
-
