

IFPEN offers independent and recognized scientific expertise to public authorities, industrial players, local authorities and judicial bodies.

To do so, IFPEN has created a structure dedicated to institutional scientific expertise and developed a charter based on the national expertise charter proposed by the French Ministry for National Education, Higher Education and Research (MENESR) as well as standard NF X50-110 relating to “quality in expertise activities”.

This expertise mission concerns all of [IFPEN’s fields of activity](#).

The ethical principles underpinning IFPEN’s expertise are competence and reliability, methodological transparency, impartiality, confidentiality, absence of conflicts of interest and compliance with commitments.

Institutional scientific expertise
