

Renewable energies	Biofuels and e-fuels	Biogas	Bio-based chemistry	Wind Energy
Geothermal energy	Hydrogen			

The energy transition and tackling climate change depend on the development of new renewable resources. IFPEN proposes processes for the production of fuels, bases for the chemicals sector and gas from biomass. IFPEN also uses its expertise acquired in the field of oil and gas to offer solutions for the industrial deployment of offshore wind energy, ocean energies and geothermal energy.
