

## RENEWABLE ENERGIES

|                    |          |        |                     |                                  |                   |
|--------------------|----------|--------|---------------------|----------------------------------|-------------------|
| Renewable energies | Biofuels | Biogas | Bio-based chemistry | Offshore wind and ocean energies | Geothermal energy |
|                    | Hydrogen |        |                     |                                  |                   |

The energy transition and tackling climate change depend on the development of new renewable resources. IFPEN proposes processes for the production of fuels, bases for the chemicals sector and gas from biomass. IFPEN also uses its expertise acquired in the field of oil and gas to offer solutions for the industrial deployment of offshore wind energy, ocean energies and geothermal energy.
