Sustainable mobility | Electrified Mobility | IC powertrains | Environmental Analysis of Transport

On 22 May 2019, Lyon hosted the “Transition Energétique : les entreprises sont en action !” (“Energy Transition: businesses are mobilized!”) conference, organized by MEDEF Auvergne-Rhône-Alpes.

Three themes were tackled:

- digital technology in energy and smart grids,
- storage and low-carbon energy,
- sustainable mobility.

An interview of Cécile Barrère-Tricca, IFPEN-Lyon site director, opened the round table dedicated to the third of these themes, focusing in particular on the importance of sustainable mobility in the Region’s economic development as well as the environmental impact of transport. She also describes the associated challenges and potential avenues for overcoming them, concluding that the transport of tomorrow will be a mix of solutions adapted to usages.
